

ENEX

NxP 2.0 : Towards an AI-augmented Editorial Platform

From Distribution to Intelligent Editorial Hub

- A platform for distributing news content (video, text, images)
- Support metadata standards (NewsML) with search, UI & API
- Currently used for news exchanges between members of ENEX
- Enex using it for members' contribution & distribution

④ Limitations identified

- No native **editorial layer**
- News creation is done in external tools (e.g STEP for Enex)
- Minimal intelligent assistance for writing
- Focused on **distribution**, not on **editorial value creation**

⤵ NxP should become an end-to-end tool

- From creation to distribution

⤵ Key Points

- Integration of a native editorial layer
- News creation, enrichment, validation directly in NxP
- AI-powered support

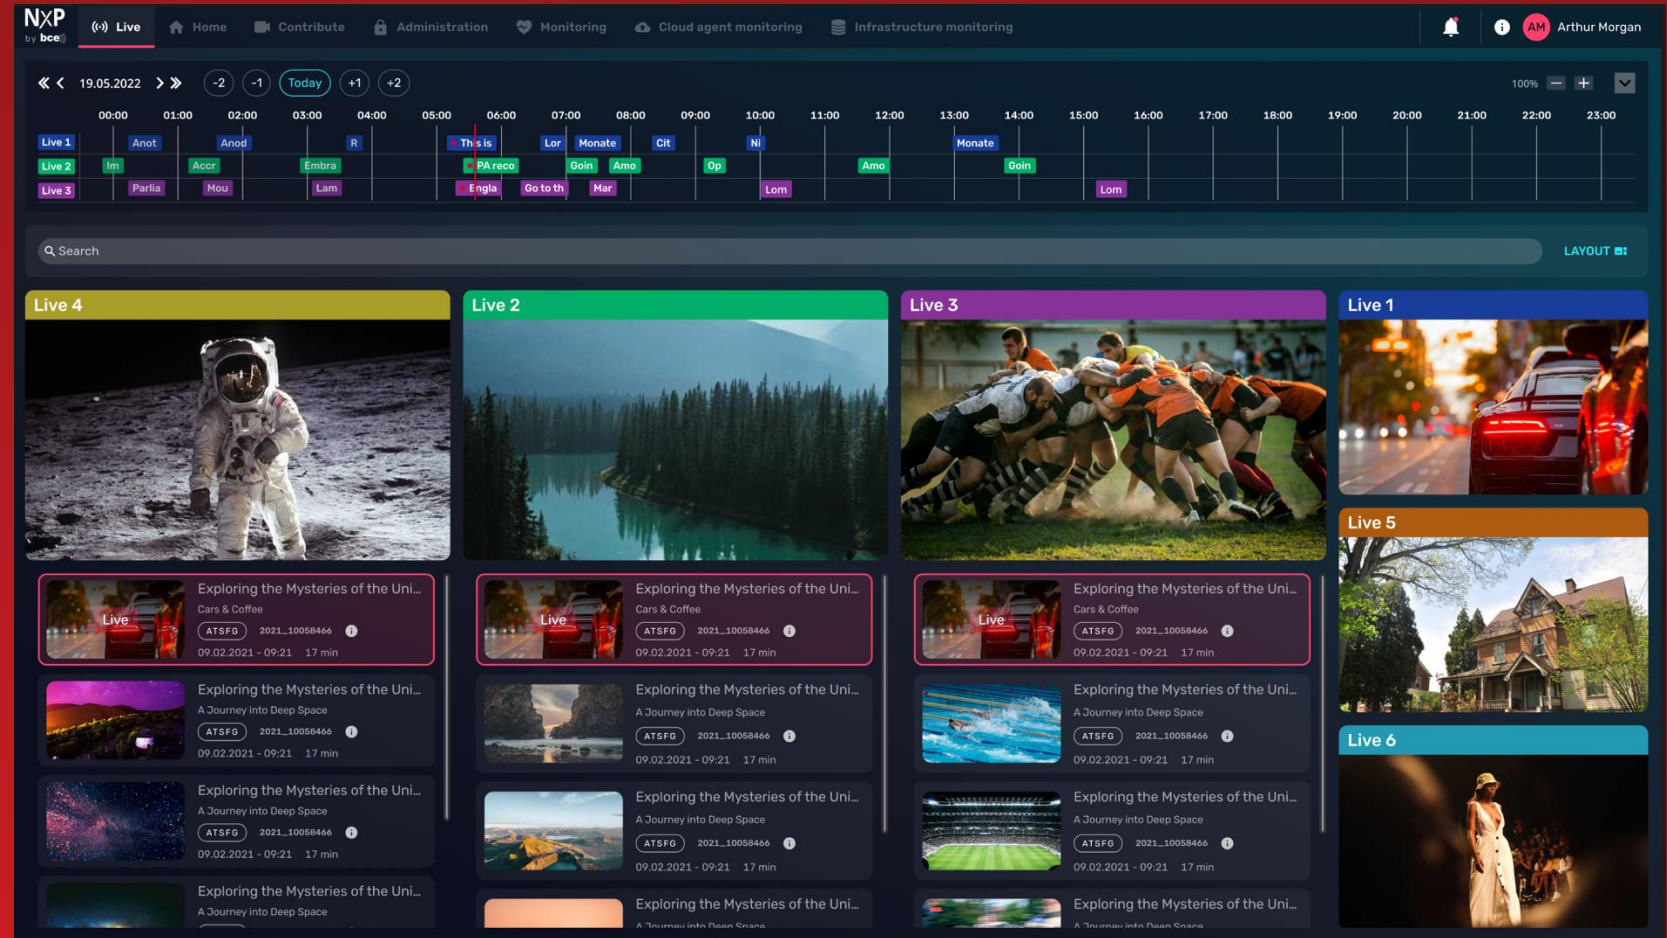

Live Management

Editorial Platform

Features :

- - 6 lives at once
- - real-time clipping
- - instant forward & sharing

The screenshot displays the NxP Live Management interface. At the top, there's a navigation bar with tabs: Live, Home, Contribute, Administration, Monitoring, Cloud agent monitoring, and Infrastructure monitoring. The main area features a 24-hour timeline for 19.05.2022, with various live feeds scheduled throughout the day. Below the timeline, there are six live video feeds arranged in a 2x3 grid, each with a title and a thumbnail image. The feeds are labeled Live 1 through Live 6. Each feed shows a different scene: Live 1 (a car), Live 2 (a landscape), Live 3 (a sports event), Live 4 (an astronaut), Live 5 (a house), and Live 6 (a person). Below each live feed, there are several smaller video thumbnails and titles, suggesting a library of content or a queue of upcoming feeds.
